McPhee Mixers: Built to Dominate

Why we're the UK's number one choice

At the forefront of concrete handling, McPhee Mixers set the industry standard for truck-mounted mixers and with over 40 years of engineering excellence you can understand why.

"We've maintained our position as the UK's Number 1 mixer supplier by delivering what buyers want most". – Nicole Marcantonio

Unmatched Innovation & Safety Leadership

McPhee Mixers has long been recognised as an industry innovator, continually introducing new safety features with patents and registered designs covering our products. For example, our e-mixer features no fewer than seven new patents, increases safety whilst lowering noise output, and saves up to 42 tonnes of CO₂ annually. Innovations like the McPhee Kneel Stay Safe system and McPhee Drum Spy demonstrate our commitment to operator safety.

Proven Scale & Manufacturing Excellence

As the UK's market-leading concrete mixer manufacturer, we supply around 400 units per year from our modern 70,000 sq ft headquarters. Our brand new 'Apollo' facility represents a massive TVS Group investment with overhead cranes, press brakes, plasma cutters, and three industrial paint booths – ensuring consistent, high-quality products when you need them.

*"Advancing operational safety through technical innovation".
– Robert Eaton, Health and Safety Manager*

What Makes Us Different

Advanced Steel Construction: Hardox® steel, manufactured to leading standards, offers superior impact resistance and optimised weight distribution, boosting efficiency and extending service life. We offer multi-capacity configurations capable of transporting heavy aggregates whilst maximising utilisation and reducing fleet size. Smart operational integration includes weighing systems, automated payload monitoring, and safety locking mechanisms with compliance-ready data logging.

Unrivalled Support Network

No other UK concrete mixer manufacturer operates from more than one location. We provide servicing and repairs from our base in the central belt between Glasgow and Edinburgh, as well as from Wisbech in Cambridgeshire and service centres across the UK. This nationwide coverage makes us uniquely positioned to support our customers wherever they are. Our commitment has helped us achieve outstanding customer retention, with relationships lasting over 30 years.

Built for Tomorrow

Our all-electric ready-mix mixer offers diesel performance with zero tailpipe emissions – one of the UK's first, marking a significant step towards net zero construction. Combined with accredited safety training through MixerSURE®, our mixers aren't just built for today – they're built for the future.

Nicole Marcantonio: The Queen of Mixers

Nicole brings unmatched dedication to every client interaction. With genuine passion for the industry, she supports customers from initial inquiry through delivery – guiding every step of the journey. Nicole ensures clarity by explaining technical options, coordinating with production, and proactively managing timelines to make your experience seamless and stress-free.

Optional Extras Include:

- Interchangeable demountable units for operational flexibility
- Synchronised conveyor systems for efficient discharge
- All-electric powertrain options for zero-emissions operation
- Safety training and leadership via MixerSURE®
- 12 metre Mixer Trailers
- Flexible finance options

Get in Touch

Contact us today to discuss your mixer requirements – whether diesel, electric, or bespoke. Let us build your business with industry-leading solutions.

SB Components

SB Components:

Bespoke Commercial Vehicle Solutions
SB Components is the UK's leading specialist in mechanical and hydraulic solutions for your commercial vehicle. With over 45 years of engineering expertise, we design and manufacture in-house bespoke components including fuel tanks, toolboxes, catwalks, hydraulic systems, and safety upgrades for trucks ranging from 3.5T to 150T vehicles.

Our Whole Vehicle Type Approved products are compatible with all major manufacturers — DAF, Iveco, MAN, Mercedes, Renault, Scania, and Volvo. We provide complete end-to-end solutions with in-house fitting, nationwide aftercare, and proven processes that deliver safety and reliability for your commercial vehicle business.

PURPOSE BODIES

Experts in refrigerated and dry freight box bodies, Luton vans, curtainsiders and dropsides. Perfect for fleet logistics, final mile delivery and utility services.

Purpose Bodies designs and builds refrigerated, dry freight, Luton box vans, and bespoke fleet bodywork for last-mile, retail, and utility operators. With in-house GRP panel production, full CAD support, and factory-fitted accessories, we offer full-bodied confidence from design to delivery.

"Purpose Bodies' refrigerated unit offers an efficient and reliable transport solution for cold chain logistics across multiple commercial sectors."

Neale Brothwood

From one-off builds to multi-vehicle contracts, we tailor each body to your fleet needs – on time, in spec, and built to last.

Wilcox is a distinguished specialist in tipper bodies – from durable steel tippers to industry-leading aluminium builds – crafted under nearly 80 years of precision engineering. At their Market Deeping facility, Wilcox employs high standards and in-house Whole Vehicle Type Approval (WVTA) to ensure each tipper meets current regulatory requirements before delivery, avoiding unnecessary delays

Their steel tippers are engineered for heavy-duty applications, offering robust load-bearing capacity, excellent impact resistance, and long service life in hard-use environments. Conversely, their aluminium tippers are globally renowned for delivering lightweight performance without sacrificing strength. Constructed using premium aluminium alloys – including double top rails and thick deck and side panels – they optimise payload and reduce operational costs.

Wilcox's growing portfolio also includes cutting-edge eTippers, combining safety-enhanced electro-hydraulic drive systems with operational data tracking for smarter fleet management and higher utilisation rates.

With Wilcox, clients benefit from wide-ranging tipping solutions – steel or alloy – that are tailored to their payload, performance and efficiency needs, all backed by meticulous craftsmanship and regulatory confidence.

Priden – The UK Market Leader in Bulk Blowing and Aluminium Body Building

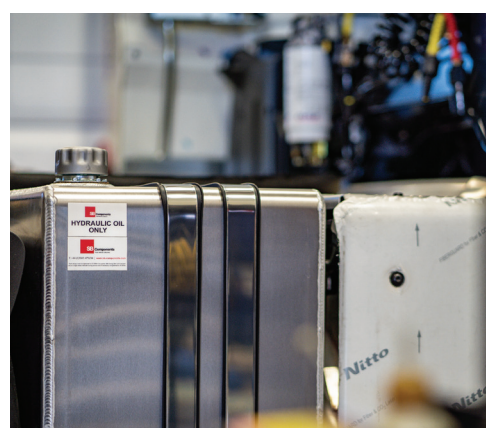

From animal feed to wood pellets, Priden's equipment is trusted across industries for its quality, efficiency, and reliability.

We set the standard with our rigid, trailer, and tractor unit solutions, all built here in the UK. Every build is developed in close partnership with operators to ensure we deliver real value to their daily operations.

When it comes to bulk blowing – Priden leads the way.

"Priden do the best blowers on the market." – ForFarmers
